Experiential futures

“the design of situations and stuff from the future to catalyse insight and change”. (Candy and Dunegan, 2017)

Draws on design, speculative artefacts, theatre, music, installations, written texts, films, etc.

INSPIRATION

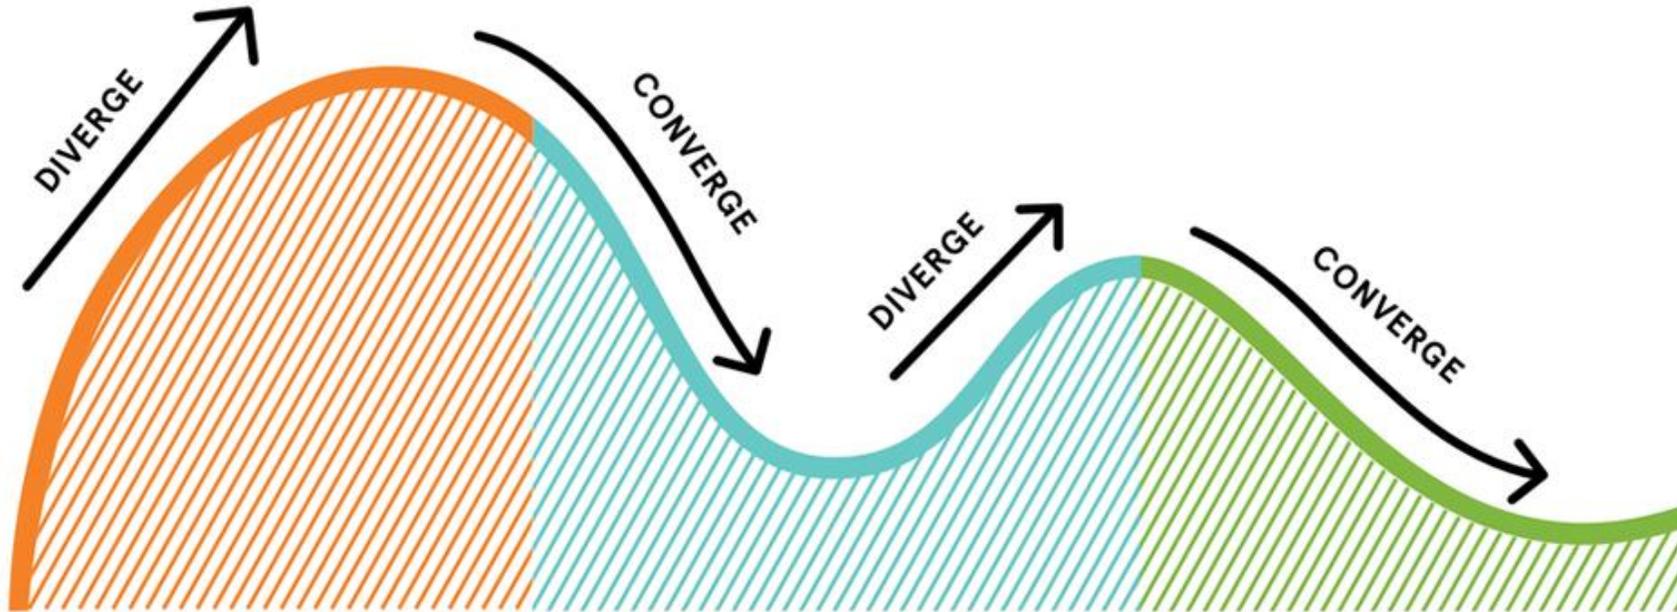

I have a design challenge.
How do I get started?
How do I conduct an interview?
How do I stay human-centered?

IDEATION

I have an opportunity for design.
How do I interpret what I've learned?
How do I turn my insights into
tangible ideas?
How do I make a prototype?

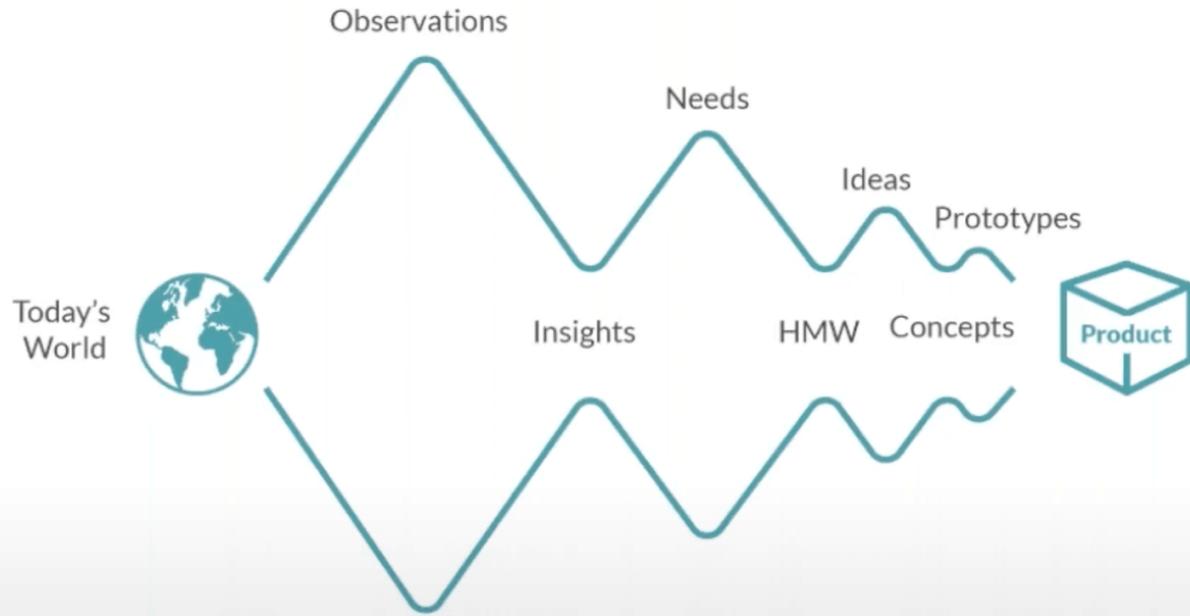

IMPLEMENTATION

I have an innovative solution.
How do I make my concept real?
How do I assess if it's working?
How do I plan for sustainability?

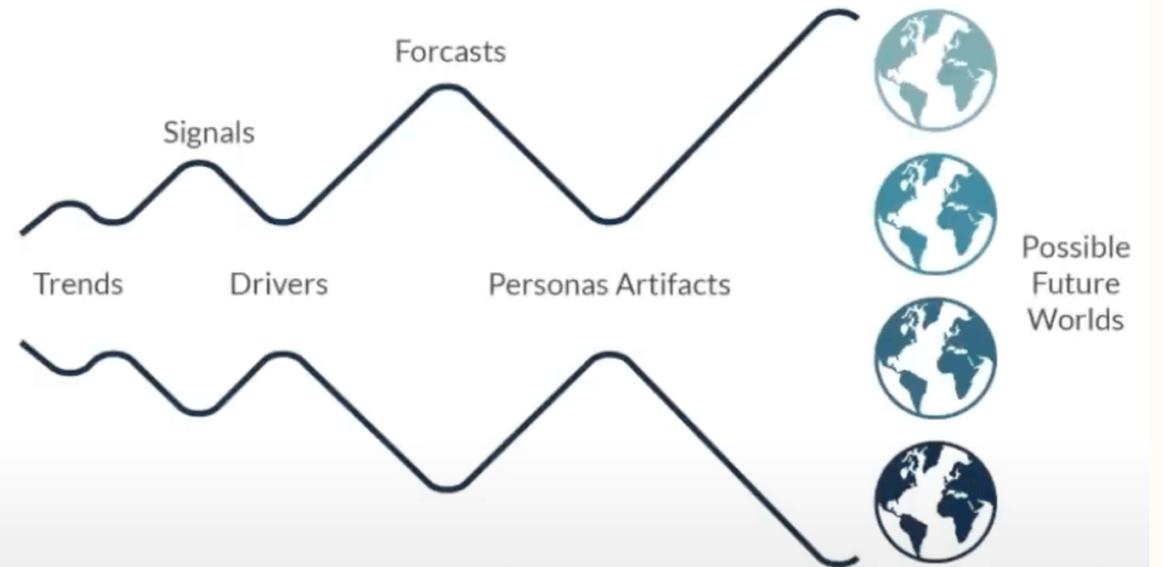

Design Thinking process model,

Design Fiction

A short essay on design, science, fact and fiction.

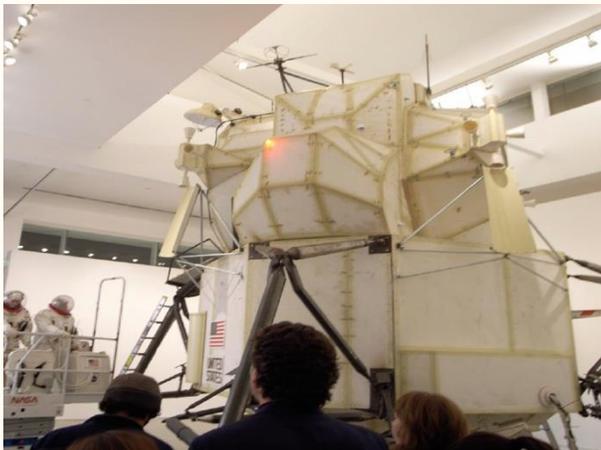

Julian Bleecker
March 2009

Near Future
LABORATORY

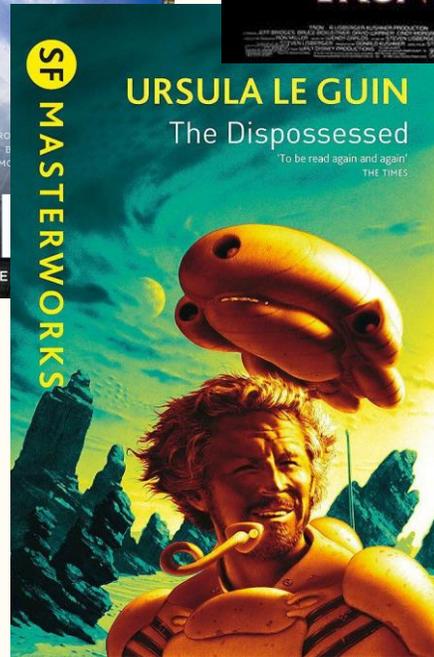

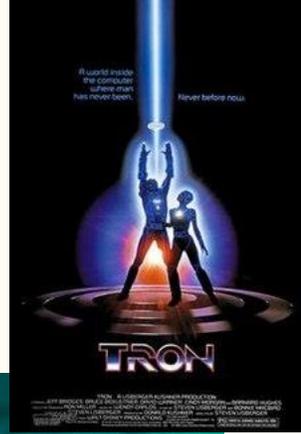

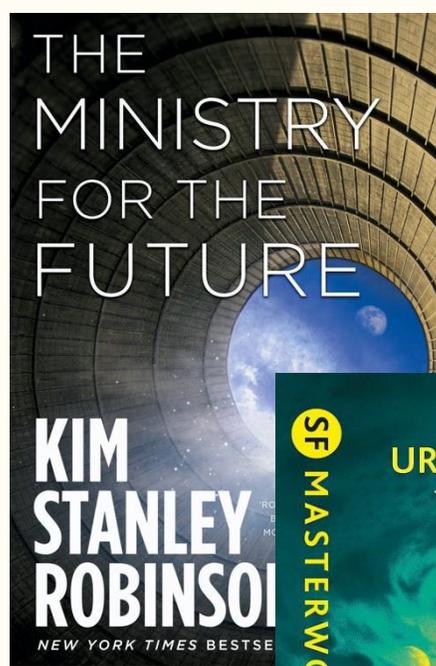

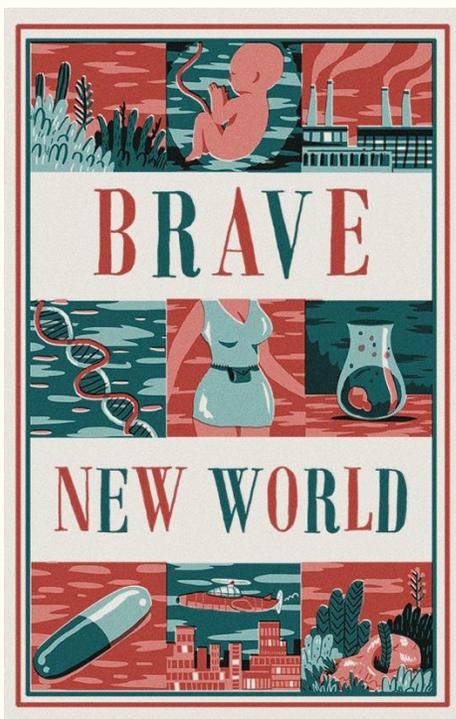

“Design Fiction is a mix of science fact and science fiction. It is a kind of authoring practice

that **combines the traditions of writing and story telling with the material crafting of objects.**

Through this combination, design

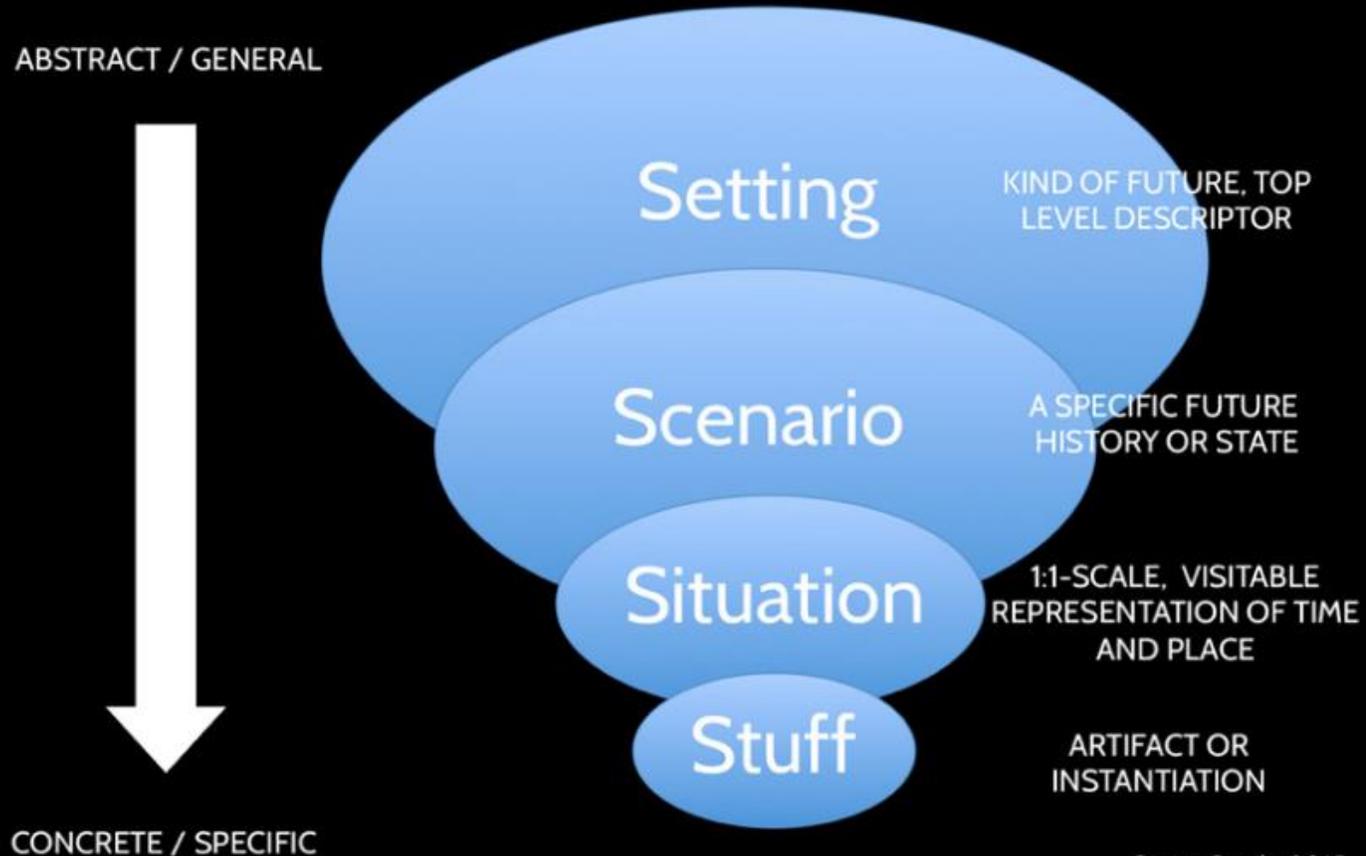

The artist Tom Sachs' sculpture/reenactment/performance called "Space Program". Sachs' project is a kind of performative mini-opera and love story between the two ingenuit astronauts and their all-male ground crew that performs the entire lunar mission, from the astronaut's suit-up, lift-off, the journey to the moon, landing, geological excavations, through to their re-entry and celebration. The mini-opera reinterprets the mission as well as the equipment. Sachs' bearded art factory rebuilt the lunar lander to exacting detail with mostly found material, except where the details were overwritten. The interior of the lander contains a comfortable lounge sofa, the video game "Lunar Lander", paperback novels, cartons of cigarettes, bottles of booze, and tequila dispensed from a dentist's water jet. This reinterpretation is, of course, a collapse of art-irony, wishful thinking and the facts of the lunar lander's construction. The joy of the piece is to be found in admiring the result of the process of hand-crafting a replica as a playful, joking, reinterpretation, the attention to nuance and detail as well as the explicit celebration of such an epic undertaking of science and technology. It is perhaps a more fitting salute to the mission and all of its sacrifices than would be a staid, sober history museum presentation. The "facts" of space travel are creatively reinterpreted to offer an imaginary science fiction story. Bits and pieces of the science facts are drawn together, including the exquisite hand-crafted detailing of the lunar lander, space suits and mission control. The line between science fact and science fiction is clear to anyone who knows what would be required of a space mission, of course. But the story makes one enjoy the creative science fictional re-imagining. Tom Sachs: Space Program, 2009. <https://cslag.illinois.edu/>

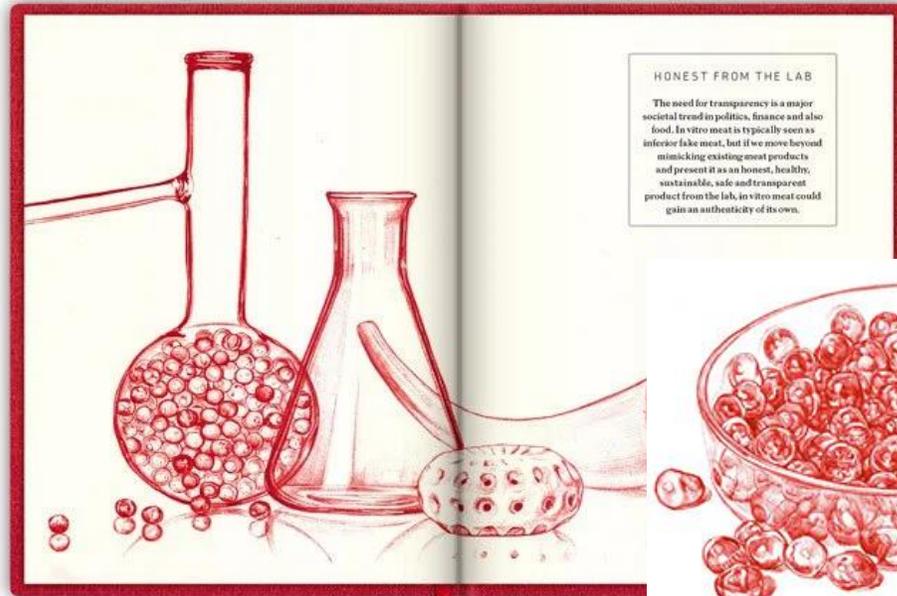

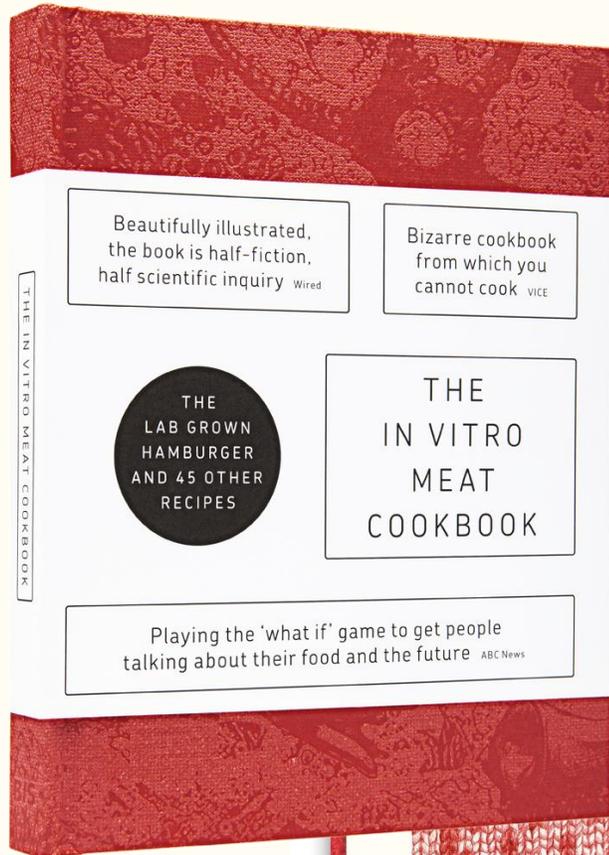

“Science fiction can be understood as a kind of writing that, in its stories, creates prototypes of other worlds, other experiences, contexts for life, based on the creative ideas of the author.

[Design fiction] can be understood similarly.”

The Experiential Futures Ladder

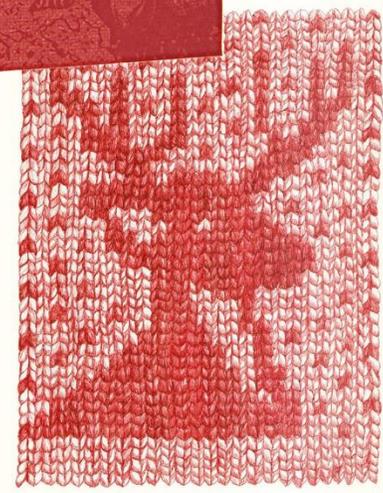

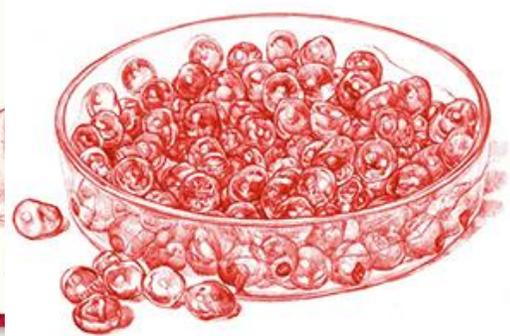

Stuart Candy, 2015

HONEST FROM THE LAB

The need for transparency is a major societal trend in politics, finance and also food. In vitro meat is typically seen as inferior fake meat, but if we move beyond mimicking existing meat products and present it as an honest, healthy, sustainable, safe and transparent product from the lab, in vitro meat could gain an authenticity of its own.

KNITTED MEAT

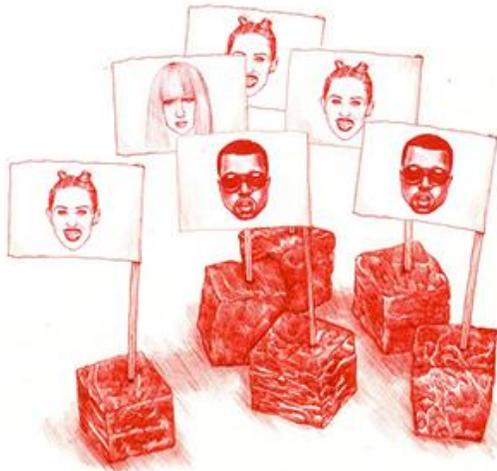

The length of a muscle fiber was once limited by the size of the animal it was growing in. Now, freed from the constraints of the body, it's possible to culture 'threads' made from continuing strands of muscle tissue. Colorful spools of meat yarn, from the light pink of chicken to the vibrant red of beef, can be woven into eye-catching patterns.

Supermarkets could install knitting machines with pre-set patterns, making it easy to knit a package of burgers or a meaty scarf. A portable model could come with easy-to-use design software for home knitters. Knitting enthusiasts could enjoy gathering in walk-in refrigerators to swap techniques. Over the holidays, many families could replace the traditional turkey or ham with a festive centerpiece of Knitted Meat.

SHEPHERD'S KNITTED PIE

- 1 kilo knitted meat
- 1 kilo potatoes
- 100 milliliters milk
- 40 grams butter
- 1 large onion, diced
- 2 carrots, peeled and diced
- 2 celery stalks, diced
- 2 garlic cloves, minced
- 1 can of diced tomatoes
- 250 milliliters stock
- 1 teaspoon Worcestershire sauce

- 1 Preheat the oven to 160°C. Boil the potatoes until cooked through. Drain and mash the potatoes with the butter and milk. Season to taste.
- 2 While the potatoes are boiling, heat oil in a skillet and sauté the onion, garlic, celery and carrots until softened. Add the tomatoes, stock and Worcestershire sauce and simmer for 10 minutes.
- 3 Spread the potato mixture in a baking dish. Top with the vegetable mixture, followed by the meat. Trim the meat to fit, and season to taste. Cover the dish with tinfoil and bake for 25 minutes. Remove the tinfoil and bake another 10 minutes or until the meat is browned.

“Design fiction is the deliberate use of diegetic prototypes to suspend disbelief about change”

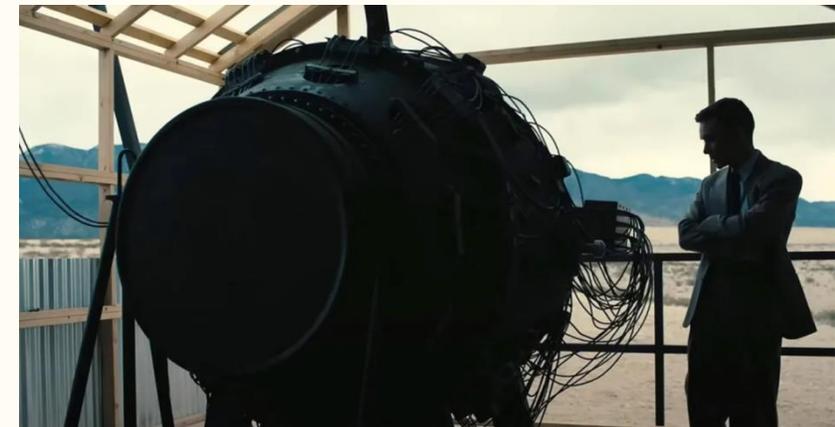

– Bruce Sterling (2013) ‘Patently Untrue...’. *Wired*

‘Diegetic’ is a term from Film Studies

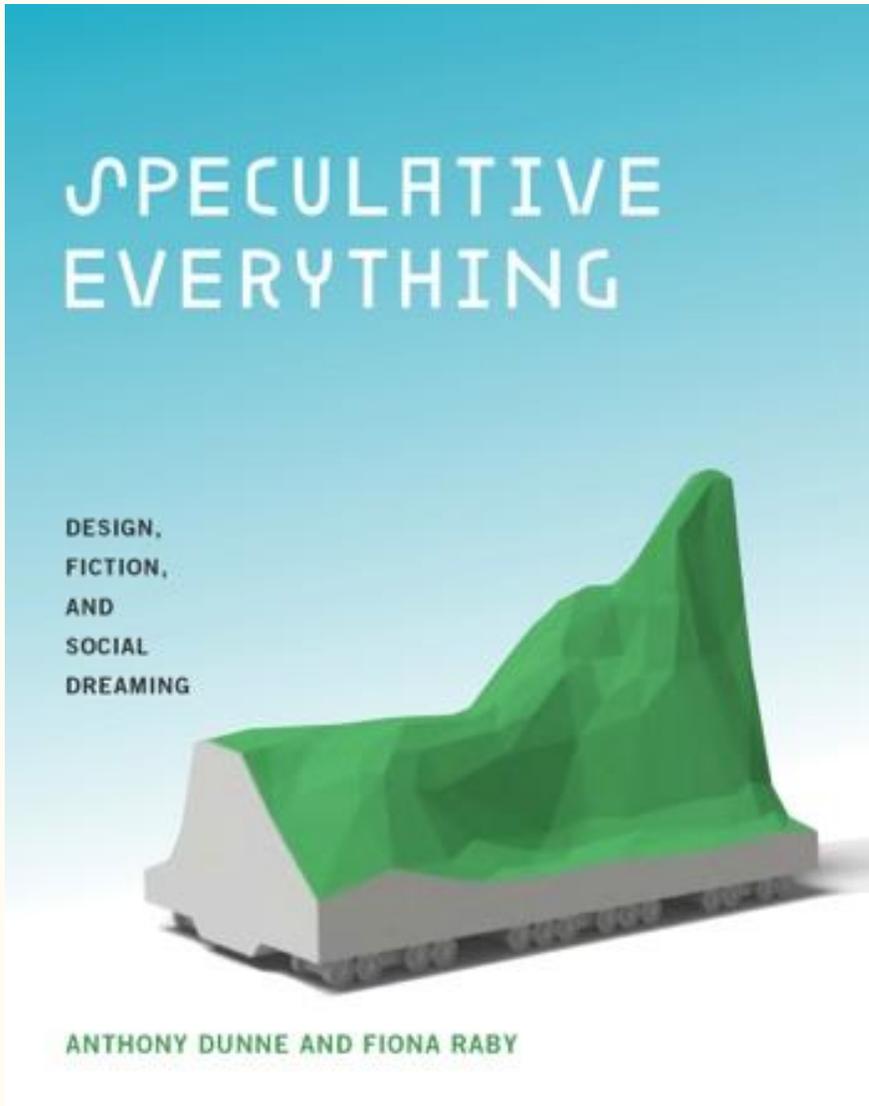

Refers to technologies, sounds, objects, (rituals, artworks, etc)

They are *real to the characters in the fictional world* that only exist in the fictional world – what film scholars call the diegesis – but they exist as fully functioning objects in that world” (Kirby, 2010)

“Design fiction is the deliberate use of diegetic prototypes to suspend disbelief about change“

– Bruce Sterling (2013) ‘Patently Untrue...’. *Wired*

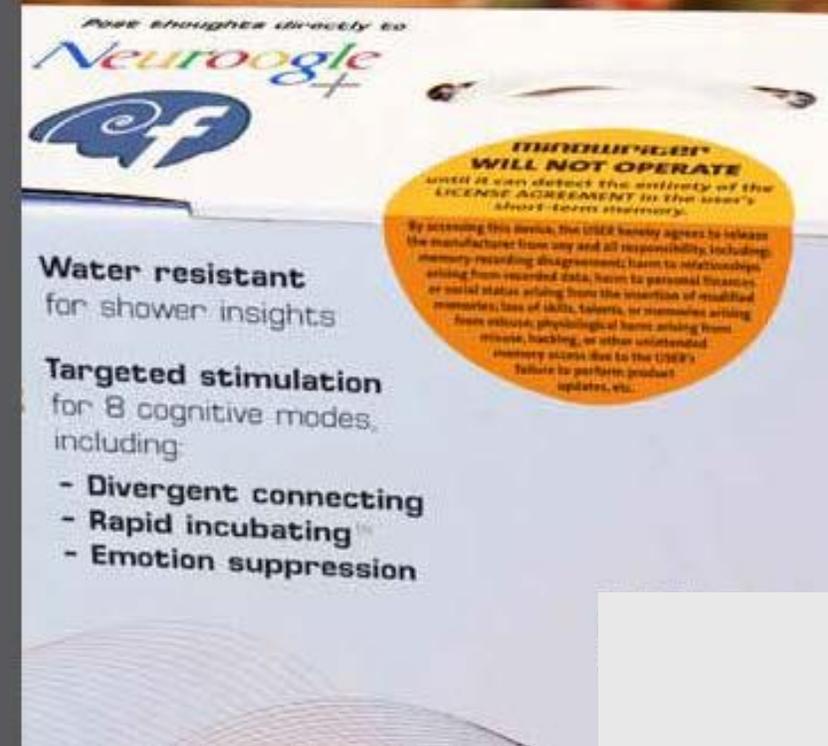

Dunne and Raby (2013)

“..designers step away from industrial production and the marketplace - enter the realm of the unreal, the fictional [...] —
design about ideas.

“...creates a **parallel design channel free from market pressures** and available to explore ideas and issues.

[can explore] **new aesthetic possibilities** for technology;
social, cultural, and ethical implications for science and
technology research; or large-scale social and political issues
such as democracy, sustainability, and alternatives to our current
model of capitalism.”

PROTECT YOUR MIND FROM COPYRIGHT INFRINGEMENT!

Sure it's fast, convenient, and sometimes brilliant to use thought recording to capture your ideas in real time and even connect with friends in your social networks. But with more and more platforms claiming copyright ownership for any thoughts you share via mindshare technologies, you need a way to protect your own rights to the product of your own mind. That's what this little cap does—it records your thoughts and assigns immediate copyrights to you before anyone else can claim them.

LINKS TO SCENARIOS

your mind is the product

The boundaries of intellectual property become even more blurred—and protections more extreme—as digital-neurological technology connects minds.

persuasive delusion

Maintaining a healthy independent identity is challenging in a world of direct brain-to-brain communication.

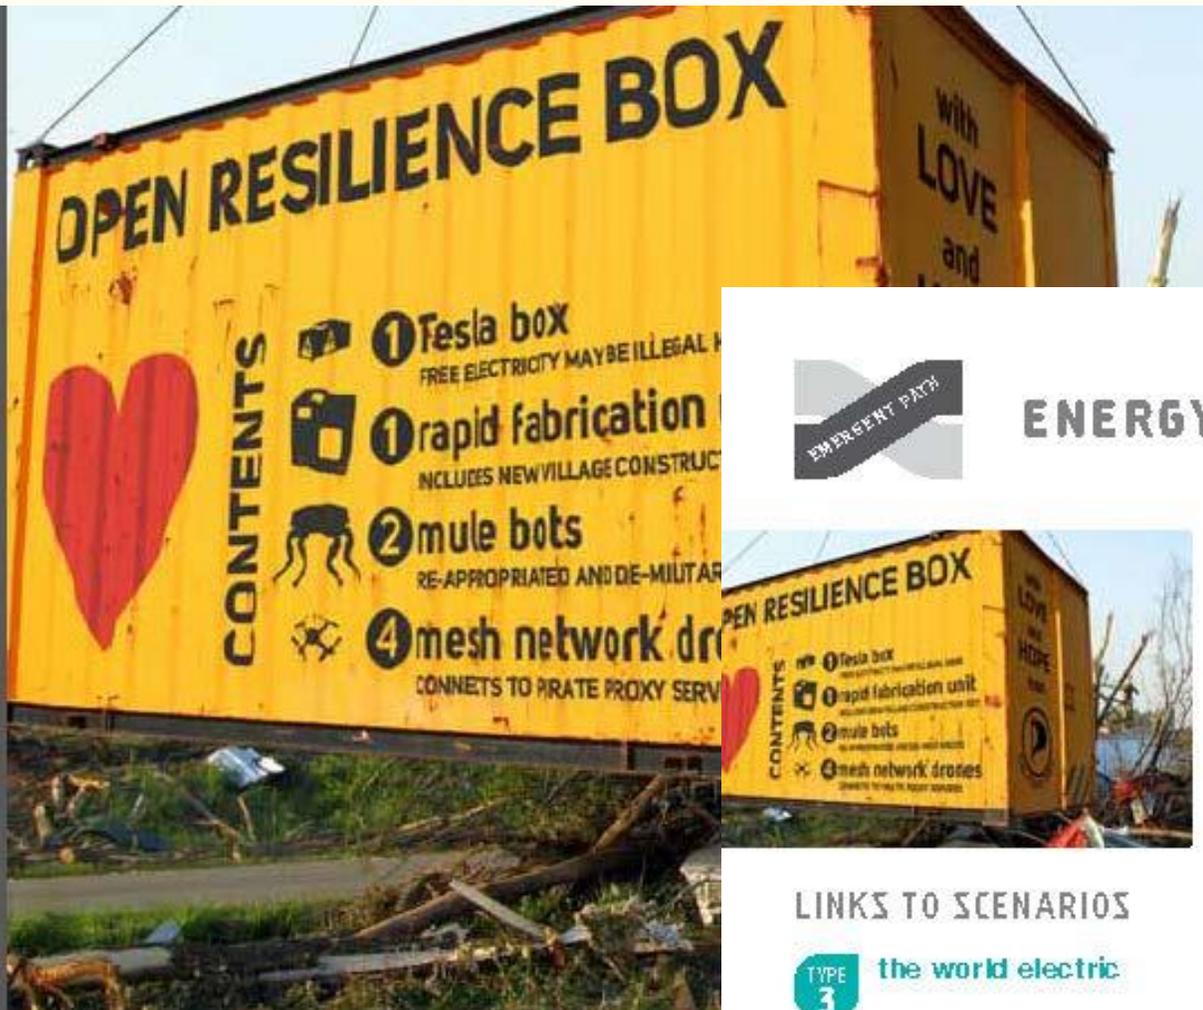

PERSONAL IDENTITY CARD FAST-TRACKS GLOBAL VOTING

Cities around the world—from Cairo to Portland, from Bangalore to Curitiba—are leading the Confederation of Sustainable Cities in establishing a governance structure to do what traditional governments have failed to do. Empowered by a global referendum that registers the will of people around the world, these cities are poised to impose strict new global regulations on automobiles. What's empowering the referendum? New digital personal identity cards that also serve as anonymous ballots.

LINKS TO SCENARIOS

TYPE 2 climate confederation

Climate impacts become a lightning rod for "city rights" and global referenda alike, creating new networks of power and citizenship that may well be at odds with state and federal governments.

ENERGY WANTS TO BE FREE

The UN has teamed up with the global Pirate Party, a political party with a platform of open intellectual property (IP), to provide new disaster relief kits that use open-source components to build ad hoc infrastructures for everything from power to water to Internet access. At the core of the relief kit is the now famous Tesla Box—a 10-foot shipping container that can power a neighborhood by harnessing the sub-atomic Casimir Effect. What else will you find in the open-source kit? Wireless lightbulbs, mobile device chargers, rechargeable desalination straws, and an Internet-in-a-suitcase.

LINKS TO SCENARIOS

TYPE 3 the world electric

New wireless power technology gets a boost from more frequent and extreme climate events where disaster kits leverage wireless technologies to get communities back on their feet more quickly.

TYPE 4 the pirate party wins!

The wireless Tesla Box lends itself to open-source strategies and is potentially an upbeat symbol for the Pirate Party.

Beyond Efficiency

A speculative design research anthology in which we seek to deconstruct ecomodern imaginaries of urban sustainability through exploring what more just and sustainable living environments could be like

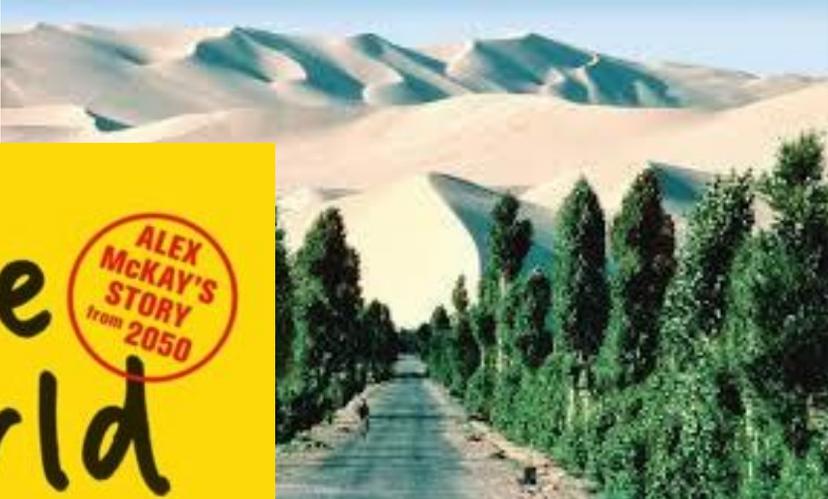

EDITED BY
Josfin Wangel & Eléonore Fauré

From imagining “What if?” to designing “As if”

Imagining an alternative future, a *what if* scenario

Treating it *as if* it is real and then creating objects, interactions, moments from that world’s everyday reality

Use in academic / scientific contexts

Game of Drones – provoking conversation

the type of enforcement currently required in that area, and the available flight time of the drone based on current battery level.

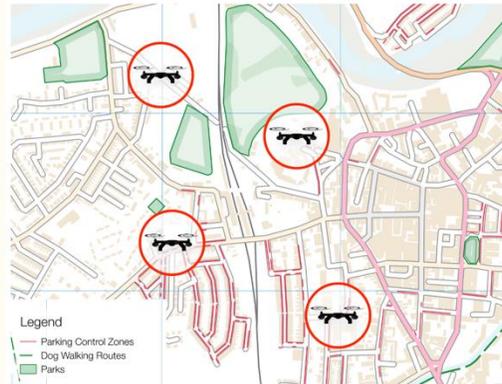

Figure 2. Map of Drone Enforcement Trial Area and Drone Stations

Gamification of Drone Operation

Whilst gamification is still a controversial topic [2] it was considered an appropriate approach for providing feedback to the users in regard their performance within the system as there is already a game like

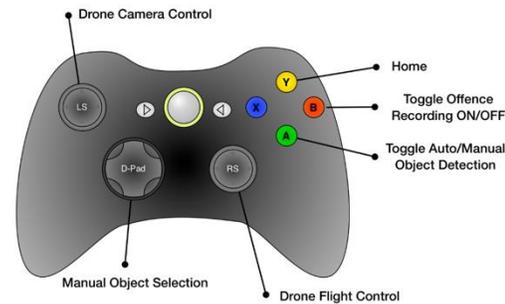

Figure 3. Drone Controls.

The most utilised feedback system for games are points that are principally used to provide a direct indication that some goal within a game has been achieved. In the case of parking enforcement points are awarded for each vehicle checked within extra points awarded for identification of parking offences. A ranking system was also incorporated based on the flight hours recorded by the drone pilots and enforcement points. During dog fouling enforcement points are awarded based on time as it relies solely on the observational skills of the pilot and extra points awarded for successful detection of an offence.

“While the vast majority of commercial providers have taken a traditional approach, employing dedicated enforcement officers to pilot the drones, in this paper we present on-going research that allows members of the local community to pilot the drones and thus act as enforcement officers. In particular it explores the gamification of these enforcement activities..”

Radical ocean futures-scenario development using science fiction prototyping

Andrew Merrie^{a,*}, Patrick Keys^b, Marc Meitani^c, Henrik Österblom^d

^a Stockholm Institute of Technology, Stockholm University, 141 85 Stockholm, Sweden

ARTICLE INFO **ABSTRACT**

Keywords: Scenario; Future; Climate change; Complex adaptive systems; Science fiction prototyping

Science can help individuals, communities, corporations and nations to develop a capacity for dealing with the unknown and unpredictable, or the unlikely but possible. A range of scientific methods for developing scenarios is available, but we argue that they have limited capacity to investigate complex sociobiological futures because: 1) nonlinear change is rarely incorporated and 2) they rarely involve socio-evolutionary dynamics of integrated socio-ecological systems. The manuscript intends to address these two concerns by applying the method of science fiction prototyping to developing scenarios for the future of global fisheries in a changing global ocean. We used an empirically informed background on existing and emerging trends in marine natural resource use and dynamics to develop four 'radical ocean futures', incorporating and extrapolating from existing environmental, technological, social and economic trends. We argue that the distinctive method we applied here can complement existing scenario methodologies and assist scientists in developing a holistic understanding of complex system dynamics. The approach holds promise for making scenarios more accessible and interesting to non-scientists and can be useful for developing proactive governance mechanisms.

1. Introduction

A scenario, described as "a coherent, internally consistent and plausible description of a potential future trajectory of a system" (Chertoff-Rosen et al., 2015) represents an important tool for proactively thinking about, and acting in a way that anticipates, things to come. Scenarios have a long history in military and corporate strategy (Dierker 1996), and are increasingly used by governments as a tool to support policy making in the field of natural resource management (Evans, Hicks, Jackson, John, & Perry, 2011; Foxworth, Cummings, & Carpenter, 2013). This is most evident in the field of climate change, where recently agreed targets substantially rely on estimated future trajectories given different pathways for carbon emissions (IPCC 2014).

Existing climate change scenarios indicate a high likelihood of major changes in marine ecosystems resulting from increases in emissions (Storch et al., 2009; Sutton et al., 2013). Diverse human activities influence these ecosystems (Lindholm et al., 2011) but scenarios for the future of marine fish stocks (Gosselo et al., 2016; Worm et al., 2006) have been criticized for assumptions about linear dynamics or the limited adaptive capacity of societies (Branch 2008; Hilborn 2007), limited empirical support for suggested management tools (Evans, 2016), and a lack of critical global dynamics (Greenfield et al., 2016). Together, these criticisms highlight the challenges of incorporating complexity in systems whose dynamics are closely intertwined with multiple human activities

Design fiction applications for organisations

Swedish Healthcare Case – using experiential futures methods, creating design fictions over 5 workshops

Munoz, Yams and Calgren (2025)
in *Futures*

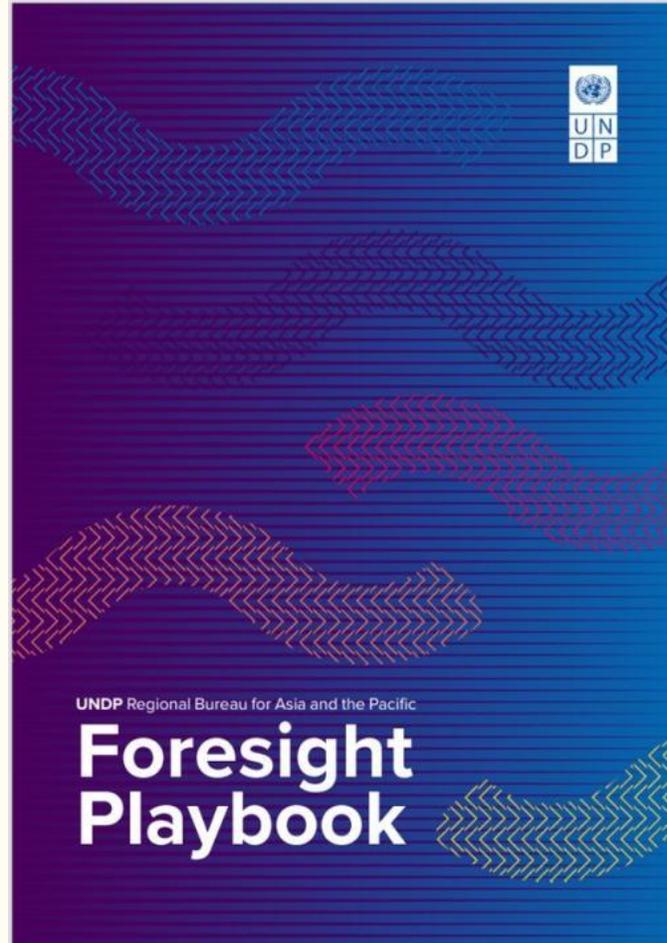

Expanding sustainability transitions research by “designing experiences of the everyday” ...

1. Harnesses the ‘**aesthetics of the everyday**’ ”the sphere of life we know very well; something we are familiar with
2. Finding **truth in fiction**. “The function of fiction is the abstraction and simulation of social experience” (Oatley and Marr 2008). Releases audiences’ obligation to critically assess; willing to *suspend disbelief*
3. People build ‘**real memories of virtual experiences**’ (psychology) that may lead to behavior change; Engagement with fictional stories builds empathy and ‘theory of mind’ (neuroscience).

critical perspectives

Relies on a conception of time that sees the future as empty and abstract, rather than embedded in the lives of people (Adam & Groves, 2010; 2022).

-Cultural idea of time, other cultures have different ways of seeing...

Speculative design still lives very much within market capitalism, and has a consumerist focus. Could be used for other, more activist means (Tonkenwise, 2014)

Interesting ways forward

1. Developing **structures/techniques for collective participation** in experiential scenarios? (Candy and Dunegan, 2017) building theory and practice
2. Futures **scenarios examining of research-society relationship** e.g. around climate, climate governance
3. Empirical research on **use of experiential futures in cross-disciplinary projects focused on sustainability, societal challenges. etc.** Developing and embedding such techniques within projects, measuring how this changes outcomes for participants, organizers, funders etc.?
4. Developing **theory and practice of experiential techniques for accessing the future** – e.g. Comparison to other experiential techniques used
